

Be clean *and* water-wi\$e! Choose **Front Load** when replacing Washers!

Alicante spends ~ \$50,000/yr on water!

Alicante

classic, comfortable, modern
in Bankers Hill

All water used by Alicante's condos and common areas is measured with a single meter, and paid in one bill. That bill is one of the Association's largest budget items: ~ \$50,000/yr.

The original clothes washers installed at Alicante are now ~10 yrs old. If they haven't yet, it's likely they'll soon need repair. Considering repair costs, and San Diego's serious drought, it may be a great time to replace your washer with new front-load unit. Switching to a front-load washer benefits you and the Association.

Compared to original top-load washers, front-load units:

- Use less than half the water!
- Use less electricity – wash *and* dry cycles
- Are gentler on your clothes

Rebate programs for water & energy saving appliances:

- Southern California water authorities:
<http://socalwatersmart.com/index.php/home/?p=res>
- SDG&E: <http://www.sdge.com/buyers-guide/399>

Appliance departments at Lowes, Home Depot, etc., should be able to help you select a model that qualifies for the rebate.
