Clean Refrigerator
Coils

Cleaning coils regularly helps refrigerators operate at their best!

Dust and pet fur can clog a refrigerator's coils – causing the fridge to run longer / use more electricity to keep its contents cold.

Recommend cleaning refrigerator coils every 6 months if you have pets, yearly if not.

Cleaning can be a do-it-yourself project. Recommend using a vacuum and a refrigerator coil lint brush (available from hardware stores) to carefully / gently clean coils:

Steps may vary for each refrigerator (e.g.; method for removing the refrigerator toe-kick grill). Consult documentation specific to your refrigerator for details. These representative videos show cleaning on two fridge types:
